

831C-L Series RF Driver

1012

The 831C series Digital Modulation Drivers are designed to operate with Isomet 40MHz AO modulators, frequency shifters and mini Q-switches for the proportional (analog) control of laser beam intensity.

These RF drivers include a crystal oscillator, a wideband balanced diode ring mixer and RF power amplifier. The mixer is used to vary the amplitude of the RF carrier according to the modulation input signal. The resulting AM signal is subsequently amplified by a Class A MOSFET amplifier.

Efficient heat transfer from the driver is required. The mounting surface must be attached to an external heat sink capable of dissipating 8W.
