## RF Amplifier

1208

The RFA901-B series are a range of air-cooled power amplifiers suitable for driving Isomet acousto-optic modulators and deflectors. The frequency input is compatible with the *ISOMET* iDDS-1-U high speed, direct digital frequency synthesiser. This amplifier features both digital gate and analog modulation inputs for the control of the RF amplitude. Protection includes an internal over temperature sensor and a 'TranZorb' over voltage diode on the DC supply input. An external interlock (or RF enable) input is provided.

The RFA901-B will operate from a +24Vdc to +28Vdc supply. LED's indicate the status of the thermal interlocks, DC supply and RF power. The maximum RF output power is adjusted by means of a pre-set potentiometer.

This standard amplifier requires forced air-cooling. An optional fan and cover assembly or a water cooled top plate can be provided. Please specify options at order.
